European Directive Atex 94/9/CE Diaphragm valves Selfa

Since 1st of July 2003, each device intended for use in potentially explosive atmospheres, sold by manufacturers, must comply with the European Directive 1994/9/CE, also known as Directive Atex 100a (EXplosive ATmosphere).

We can declare that none of diaphragm valves from Selfa Valves & Fittings (with the exception of valves equipped with position sensor) are concerned by the ATEX 94/9/EC directive. Effectively, the risk analysis performed show that they don't contain their own ignition source.
