TECHNOLOGY OVERVIEW

SUPPLY BOARDS

A **supply board** is used in a central gas supply system in order to reduce the cylinder pressure to an appointed secondary pressure. The supply board will then supply a stable pressure to line regulators or points of use.

A supply board can be considered like a simplified switch over board (without the continuous gas supply from several high-pressure sources).

Most of our supply boards have 3 common inlets available. This avoids installation of extensions and increases safety of the installation.
Our products exist in raw brass, chrome plated or stainless steel. The installed regulators are coming from our standard product range.

SWITCH OVER BOARDS

Rotarex switch over boards can make your source management easier. Our first target is to make your installation safer, easier-to-control and to help you improve cost productivity.

SAFETY:

- DUOBLOC: 4-6 cylinder connections possible w/o extension - to improve the global system tightness of the process and reduce leakage points. Also, with the DUOBLOC concept you can purge independently each side. The purge can also be collected.
- RELIEF VALVE: all supply and switch over boards are standardly equipped with a safety relief valve (one on semi-automatic version, 2 on fully automatic version).
- INVERTER (full automatic)/BYPASS DESIGN (semi automatic): Its design avoids gas flow into the other side.
- Dedicated pressure gauges (HP and LP). Contact gauges could also be mounted in order to connect to an alarm box.
- With installation of a gas monitoring system, you can easily check your gas consumption from your desk.

EASE OF HANDLING:

- Easy access of purging and isolation valve.
- Easy installation with all components pre-mounted on an Omega plate.
- All components for service are easily accessible.

LOWER OPERATING COSTS:

- A continuous gas supply to the process means less production interruptions or unplanned disruption to change gas cylinders.
- Larger cylinders together = fewer cylinders = lower rental charge, less transportation charge, better cylinder management.
- Grouping all cylinders in one location means also space saving in production area or in lab which are very expensive surfaces.

MANUAL SWITCH OVER BOARDS

A **manual switch over board** reduces the cylinder pressure to an appointed secondary pressure and insures gas supply from different high-pressure sources. It ensures a safe cylinder replacement.

When one high-pressure supply source is in service, the other is in reserve.

When the service source is empty, the operator must change the service side to the reserve side manually when changing the empty cylinder

TECHNOLOGY OVERVIEW

SEMI-AUTOMATIC SWITCH OVER BOARDS

A **semi-automatic switch over board** is a system which provides a continuous gas supply to the piping system. One source of gas is used as the primary source, while a second source is held in reserve.

When the primary source reaches a predetermined pressure, the reserve supply automatically begins to supply gas to the system.

Once the switch over occurs and primary source is replaced, the switch over board is reset, such that the reserve supply supplying gas is now designated as primary source and the secondary source is now held in reserve. The empty cylinder can be replaced without interrupting the gas flow.

AUTOMATIC SWITCH OVER BOARDS

An **automatic switch over board** switches automatically, when the service source is empty, to the reserve source and does not need to be reset to allow reversal of the cycle. A switch over board will reduce the cylinder pressure to an appointed secondary pressure and will insure continuous gas supply from several high-pressure sources.

This reduces the need for continuous operator monitoring and ensures a safe cylinder replacement. When one high-pressure supply source is in service, the others are in reserve. When the service source is empty, the switch over board switches automatically to the reserve source for a continuous gas supply to the process at the same pressure. The empty cylinder can be replaced without interrupting the gas flow.

HOW TO CHOOSE BETWEEN SEMI-AUTOMATIC AND FULL AUTOMATIC

WHEN SEMI-AUTOMATIC :

- For small installations with low gas consumption
- When the process is not sensible to pressure drop after the switch.
- When you want to change the cylinders at each switch.

WHEN AUTOMATIC :

- When the process needs stable delivery of outlet pressure (P2).
- When the installation has a huge gas consumption.
- When using bundles.
- When safety is paramount > reduction of operator presence.
- When less external intervention is desired for better productivity.
- For supply installations far away from the process.

PREMIUM QUALITY FOR BETTER PERFORMANCE

All our regulators are designed respecting the EN ISO 2503. The production of the regulator is certified according to ISO 9001. Also external audits from customers help us to improve continually our products. This strategy is also applied on our supplier base which is working very closely with us in order to reach new standards and new performance.

In order to fulfil the customer expectations regarding quality, Rotarex implements state-of-the-art quality management practices used in the automotive industry in order to stay Best In Class.

During the production of your regulator we have several control steps in order to provide you the best quality:

- Supplier Audit in order to control that they fulfill our standards
- 100% cleaning of all parts to O₂ standards
- Steaming of some specific components
- Measurement control of parts coming from the production
- 100% Helium leak test
- 100% functional test

Most of the supply and switch over boards produced by Rotarex are designed for applications with gas purity up to 6.0 with a leak rate of 10⁻⁸ mbar l/s of helium.

FLOW MEASUREMENTS

Flow curves are based on the ISO EN 2503 Norm. The nominal flow are specified for the nominal inlet pressure with the regulator set at the nominal outlet pressure. The outlet flow will then decrease when the regulator is set at a lower outlet pressure than the nominal one.

For specific application, do not hesitate to contact us to get the exact flow at the wanted values.

SERVICE

In order to prevent possible contamination, we recommend that the operator performs a purging after the cylinder change. This maintenance step will help remove moisture, air and other impurities from the system before introduction of gas into the process. This maintains a constant purity in the circuit.

For some products like our supply/ switch over boards, it is recommended to perform an annual maintenance in order to prevent wearing of some components. Our customer service team remains at your disposal to supply special spare parts.

SAFETY

All products are tested under pressure and also leak-tested before shipment. Our high pressure regulators are also equipped with safety relief valves in order to prevent any damage of the regulator.

Important notice: the safety relief valve fitted on our regulators will only protect the regulator in case of accident and cannot be used to protect the down stream process. When it is needed to protect the down stream process, use a CE safety relief valve on the pipe work.

It is also possible to collect the purge on our equipment in order to avoid any gas dispersion in the atmosphere when using toxic gas.

PRESSURE REGULATOR TECHNOLOGIES

Rotarex Supply Panels and Switch over Panels use 3 main pressure regulator technologies to achieve a stable and reliable pressure regulation:

BALANCED VALVE

- Best-in-class pressure stability
- Minimizes the effect of inlet pressure fluctuations on outlet pressure
- Increases regulator lifetime and reduces cost of ownership by reducing seat effort
- Diaphragm technology only

DIAPHRAGM

- Our most-used technology (cylinder regulation, line, supply panel...)
- Compact design
- Good precision

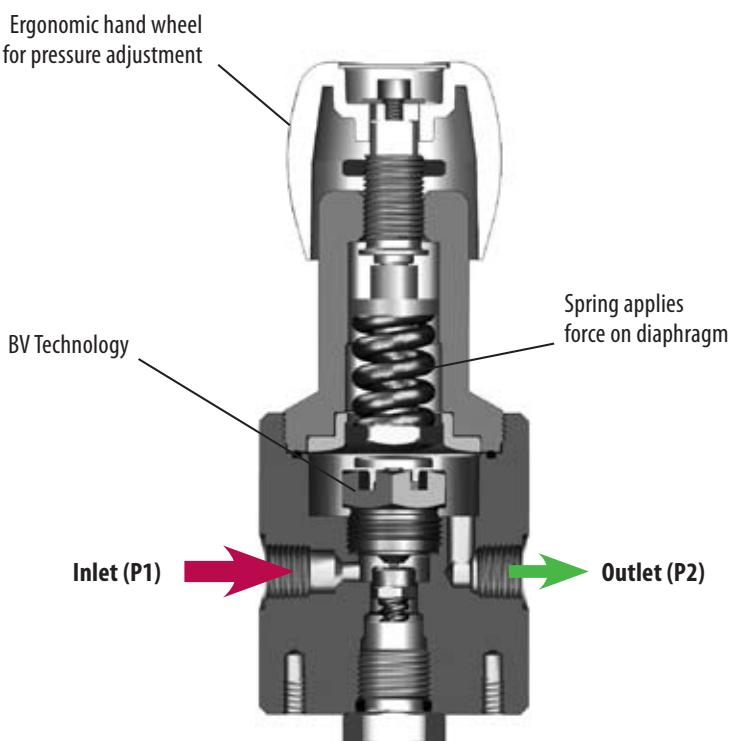

PISTON

- Stable outlet flow
- Used for regulator where the pressure outlet is close to the inlet pressure

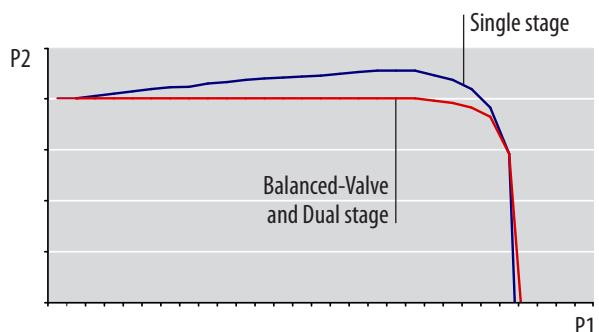

BALANCED VALVE TECHNOLOGY

Our **Balanced-Valve Technology regulator** gives you dual stage regulator performance in a single stage design. Due to its proprietary design, it is able to balance the internal forces within the regulator and compensates for the pressure fluctuation on the inlet. It provides a constant outlet pressure like a dual stage regulator but with a lower total ownership cost.

Switch over boards equipped with this technology don't need any line regulator afterwards and can be connected directly to the application.

SELECTING THE RIGHT SUPPLY SYSTEM

To choose the right supply solution for your application, and to get the best results, you should identify the following technical parameters:

TECHNICAL PARAMETER	EXAMPLE
Gas	Inert, flammable, oxidizing, corrosive, toxic
Purity	UHP, HP, industrial, medical, diving
Nominal inlet pressure	Bar or psi
Nominal outlet pressure	Bar or psi
Nominal flow (N_2)	Nm ³ /h or Nlpm
Single stage or dual stage ?	Dual stage or BV Technology are needed where pressure stability is essential
Product	Regulator, point of use, supply board, switch over board
Material	Brass, chrome plated brass, stainless steel
Inlet connection	Country of use, standard, connection
Outlet connection	G 3/8, 1/4 NPT, male, female, special
Gauges	Low pressure, high pressure, sliding, inductive
Safety device	Yes/no
Vacuum	Yes/no
Application	Food, electronic, medical, welding, industrial, diving...
Outdoor or indoor use	Environment
Temperature range	-20°C to +60°C / -4°F to +140°F
Atex use	Yes/no
Preset outlet pressure	If yes, which pressure ?
Marking	CE, TPED, PI

Each product page is designed to provide you the essential technical information at a glance:

18 SUPPLY BOARDS

SERIES CM 104 | SUPPLY BOARD

APPLICATIONS

- Dual stage
- Point of use
- Inlet/outlet pressure gauges
- Safety relief valve
- Equipped with 1 bar and 5 bar
- Special request on request

GENERAL

- Possible to connect 3 types of cylinders and a gas purging operation (up to 2 cylinders without extension - without using the purge line).
- Ready to install with all components pre-mounted on a single plate.
- Suitable for pure and corrosive gases for high purity applications.
- Can be equipped with a collection tube on the safety relief valve.
- Also can be equipped with an outlet shut-off valve.
- The CM 104 can be connected to an alarm box using contact gauge.
- NI version available.
- P1 = 8 bar/P2 = 3 bar/Q = 5 Nm³/h.

SELECTING THE RIGHT SUPPLY SYSTEM (continued)

BODY MATERIALS

Most Rotarex Supply and Switch over Boards are available in stainless steel 316L or chrome plated brass, and on some models, raw brass or aluminium. Which material is best for your installation?

Stainless steel 316L: The recommended option for corrosive gases and high-purity applications due to its superior resistance, non-reactivity, exceptional durability and high-surface finish properties. It is compatible with most gas types and low-velocity oxygen applications.

Rotarex uses stainless steel type 316L, an austenitic chromium nickel stainless steel containing Molybdenum. It offers:

- Exceptional corrosion resistance - particularly against sulfuric, hydrochloric; acetic, formic and tartaric acids, acid sulfates and alkaline chlorides
- resistance to pitting from chloride-ion solutions
- outstanding strength even at elevated temperatures

Chrome plated or Raw Brass: The most commonly used material for industrial and high velocity oxygen applications due to its cost effectiveness versus stainless steel, good strength, resistance and low-friction flow properties.

Need more information? You can find more detail about optional materials on our website. Additionally, one of our material engineers would be happy to discuss the pros and cons of each option to help you choose the best solution.

www.rotarex.com

Gas Compatibility: Make sure the body material is compatible with the gas type you will be using. Consult the gas compatibility reference chart on page 64.

O-RING MATERIALS

For many regulators, a choice of O-ring materials is available:

- | | |
|-------|---------------------------|
| EPDM: | Ethylene Propylene Rubber |
| NBR: | Nitrile Butadiene Rubber |
| FPM: | Fluorocarbon Rubber |

Gas Compatibility: Make sure the O-ring material is compatible with the gas type you will be using. Consult the gas compatibility reference chart on page 64.

INLET/OUTLET PRESSURES

Different models are designed for different inlet and outlet pressure performance. The available options are clearly indicated on each product page. Please specify which inlet and outlet pressure when ordering. We can also accommodate special requests.

PRESSURE GAUGES

Most Rotarex supply and switch over boards are equipped with a choice of pressure gauges. High Pressure and/or Low Pressure - and sliding or induction versions. Check the product configurator table on each product page.

SELECTING THE RIGHT SUPPLY SYSTEM (continued)

SAFETY RELIEF VALVE

Safety relief valves are standard on most Rotarex supply and switch over boards as a safety best practice.

OTHER PRODUCT OPTIONS

Some product solutions have additional options specific to their unique application, such as contact gauges, outlet valves, configuration... etc. These options are clearly indicated on the product configuration table on each product page .

APPLICATIONS

- Diaphragm single Stage
- Inlet Purity 0 to 6.0
- Inlet Pressure 200 bar (2900 psi)
- Maximum pressure 10/25/50 bar
- 145/163/175 psi
- 145/163/175 bar
- 145/163/175 psi version: P1 = 8 bar (116 psi)
- P2 = 3 bar (43 psi)
- 1 double
- 1 outlet
- Inlet/outlet pressure gauges
- 1 safety relief valve
- 1 outlet valve
- Equipped with SI 220 regulator

GENERAL

- Used to connect 3 gas cylinders and a gas for purging operation (up to 3 cylinders without any extension - without using the purge line).
- Ready to install with all components pre-mounted on the board.
- Can be equipped with a collection tube on the safety relief valve and purge connection.
- All valves can be controlled with an outlet shut-off valve.
- The CM 104 can be connected to an alarm box using DIN rail.
- NM version available:

P1 = 8 bar/P2 = 3 bar/Q = 5 Nm/h.

NOTES

SERIES MOD | SUPPLY BOARD

- Diaphragm single stage
- Balanced-Valve Technology
- Purity up to 5.5 (6.0 without the ball valve)
- Inlet pressure: 200 bar (2900 psi) or 300 bar (4350 psi)
- Outlet pressure: 10/16/30/50 bar 145/232/435/725 psi

- ★ 1 duobloc
- ★ 3 inlets/1 outlet
- ★ Inlet/outlet pressure gauges
- ★ 1 safety relief valve
- ★ 1 purge outlet
- ★ O₂ application compatible (see technical data)
- ★ Acetylene version available
- ★ Propane version available

Special requirements on request

APPLICATIONS

- Used in combination with a switch over board for the regulation of the emergency source during maintenance on the principal source. This avoids installing extensions and reduces the amount of leaking points.
- Suitable for the high flow supply of industrial gases except toxic and corrosive gases.

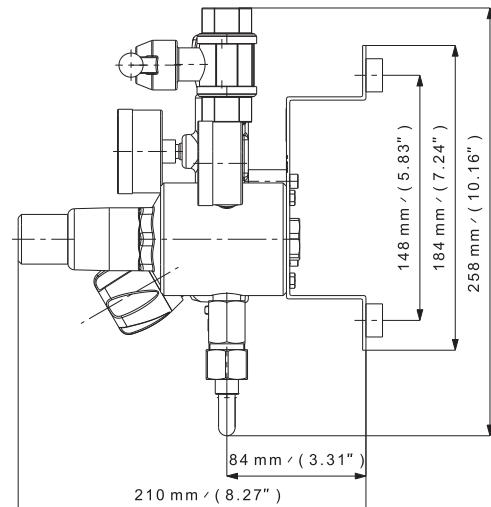

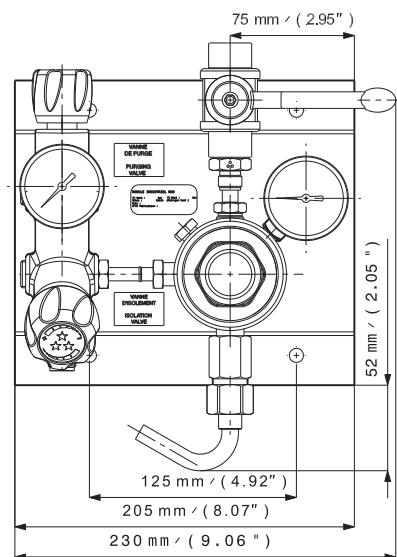

KEY FEATURES

- Possible to connect 2 gas cylinders and a gas for purging operation (up to 3 cylinders without any extension - without using the purge line).
- Ready to install: all components are pre-mounted on a board.

- Best-of-class pressure stability with Balanced-Valve Technology: the effect of inlet pressure fluctuations on outlet pressure are minimized. Balanced-Valve Technology enables the delivery of a very stable outlet pressure and flow even with high flow line regulators.
- Non-whipping filter improves safety of the operator during the cylinder replacement.
- Can be equipped with an outlet 1/4 turn shut-off valve (Multi-turn valve with 30 bar or 50 bar version for oxygen use).
- Can be connected to an alarm box using contact gauges.
- Acetylene version available: P1 = 25 bar / P2 = 1 bar/Q = 6,5 Nm³/h.
- For use with acetylene this product must be installed with a flash back arrestor complying with the standard EN 730 located downstream.
- Propane version available: P1 = 25 bar/P2 = 4 bar/Q = 10 Nm³/h.

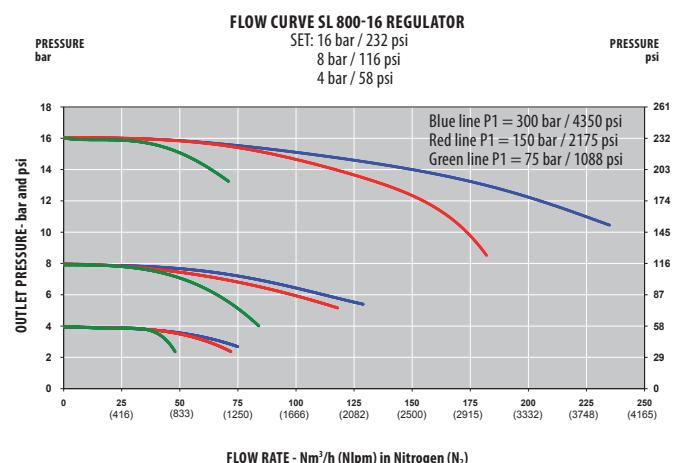

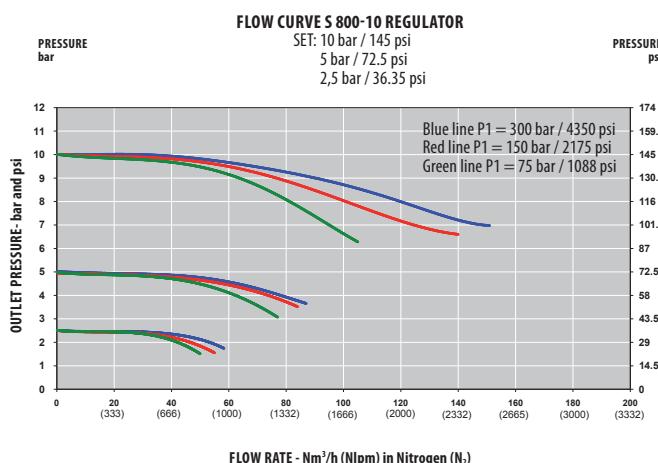

3 inlet ports

APPLICATIONS

- Used in combination with a switch over board for the regulation of the emergency source during maintenance on the principal source. This avoids installing some extension and reducing the amount of leaking points.
- Suited for pure and corrosive gases for high purity applications
- Specifically dedicated to the supply of gas to analyzers and to the creation of controlled atmosphere in laboratories, control units.

KEY FEATURES

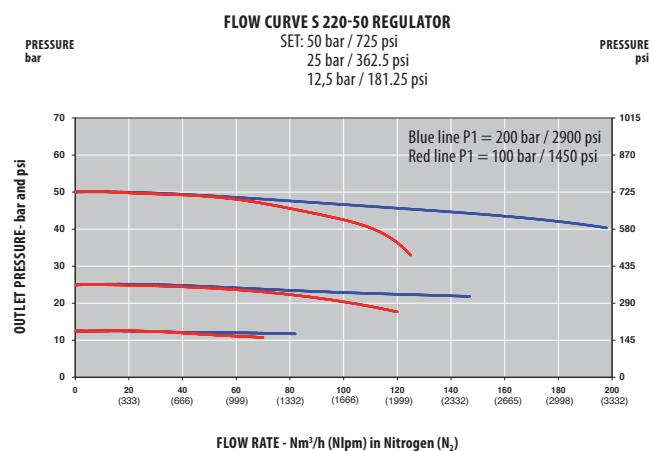

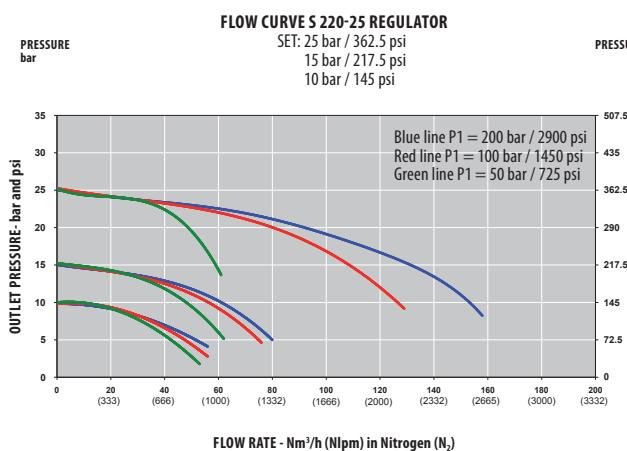

- Possible to connect 2 gas cylinders and a gas for purging operation (up to 3 cylinders without any extension - without using the purge line).
- Ready to install with all components pre-mounted on a board.
- Can be equipped with a collection tube on the safety relief valve and purge outlet.
- Also can be equipped with an outlet shut-off valve.
- The CMI 104 can be connected to an alarm box using contact gauges.
- NH_3 version available:
 $P_1 = 8 \text{ bar}/P_2 = 3 \text{ bar}/Q = 5 \text{ Nm}^3/\text{h}$.

APPLICATIONS

- Used in combination with a switch over board for the regulation of the emergency source during maintenance on the principal source. This avoids installing some extension and reducing the amount of leaking points.
- Ideally suited for pure and corrosive gases for high purity applications - primarily dedicated to the supply of gas to analyzers and to the creation of controlled atmosphere in laboratories, control units.

KEY FEATURES

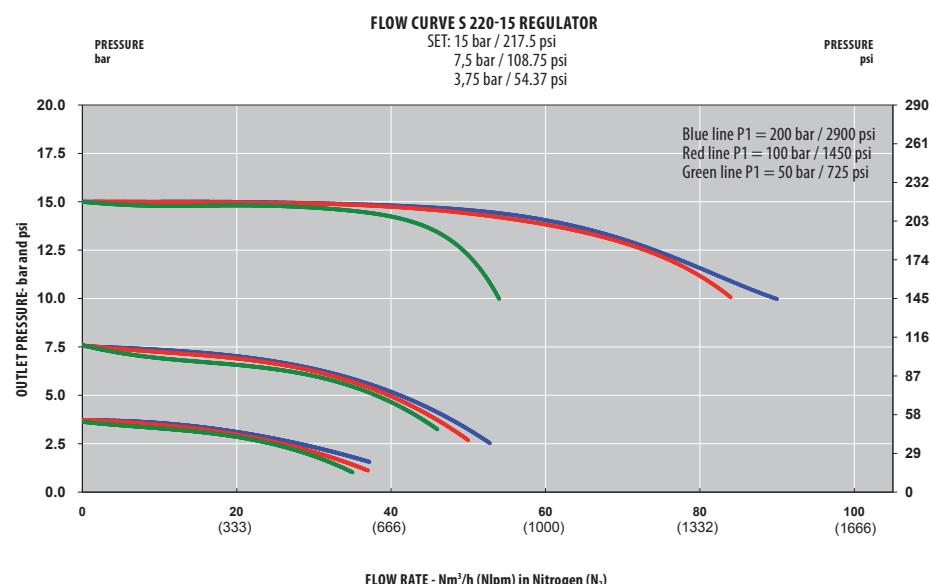

- Possible to connect 1 gas cylinder and a gas for purging operation.
- Ready to install with all components pre-mounted on a board.
- The CMI 104 can be connected to an alarm box using a contact gauge.

3 inlet ports

APPLICATIONS

- Used in combination with a switch over board for the regulation of the emergency source during maintenance on the principal source. This avoids installing extensions and reduces the amount of potential leak-points.
- Ideally suited for pure and corrosive gases for high purity applications dedicated to the supply of gas to analyzers and to the creation of controlled atmosphere in laboratories, control units, and for petrochemical application.
- Acetylene version is recommended for atomic absorption analyzers.

KEY FEATURES

- Possible to connect 2 gas cylinders and a gas for purging operation (up to 3 cylinders without any extension - without using the purge line).
- Ready to install with all components are mounted on a board.
- The CM 204 can be connected to an alarm box using contact gauges.
- Can be equipped with a collection tube on the safety relief valve and purge outlet.
- Can also be equipped with an outlet shut-off valve.
- Acetylene version available:
 $P_1 = 20$ bar / $P_2 = 1$ bar / $Q = 1$ Nm³/h.
- For use with acetylene this product must be installed with a flash back arrestor complying with the standard EN 730 located downstream.

APPLICATIONS

- Ideally suited for pure gases for high purity applications to put vessels under pressure and for leak detection and purge of pipe work.
- Used in combination with a switch over board for the regulation of the emergency source during maintenance on the principal source. This avoids installing some extension and reducing the amount of leaking points.

KEY FEATURES

- Adjustable outlet pressure
- Possible to connect 2 gas cylinders and a gas for purging operation (up to 3 cylinders without any extension - without using the purge line).
- Ready to install with all components pre-mounted on a board.
- Connectable to an alarm box using contact gauges.
- Can also be equipped with a 1/4 turn shut-off valve on the outlet.
- Collection tube available on the safety relief valve and purge outlet.
- Downstream regulation system can be decompressed by turning the hand wheel counter-clockwise.

- ★ 2 duoblocs
- ★ 2 x 3 inlets/1 outlet
- ★ Inlet/outlet pressure gauges
- ★ 1 safety relief valve
- ★ 2 purge outlets
- ★ O₂ application compatible

Special requirements on request

APPLICATIONS

- Suitable for the high flow supply of non-corrosive industrial gases when high flow are required like for plasma TIG and MIG cutting and welding applications.

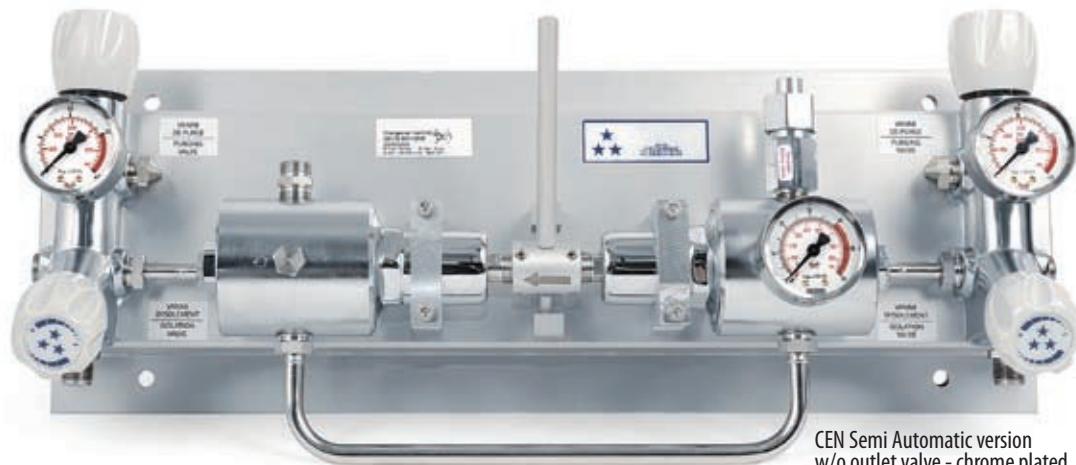

KEY FEATURES

- Possible to connect 4 gas cylinders without any extension and a gas for purging operation (up to 6 cylinders without any extension - without using the purge line).
- No risk that a source flows into the other one.
- Exists also in an AUTOMATIC version (with 10 and 16 bar outlet pressure). This automatic switch over board does not need to be reset to allow reversal of the cycle.
- Ready to install with all components pre-mounted on a board.
- Best-of-class pressure stability with Balanced-Valve Technology: the effect of inlet pressure fluctuations on outlet pressure are minimized. Balanced-Valve Technology enables the delivery of a very stable outlet pressure and flow.

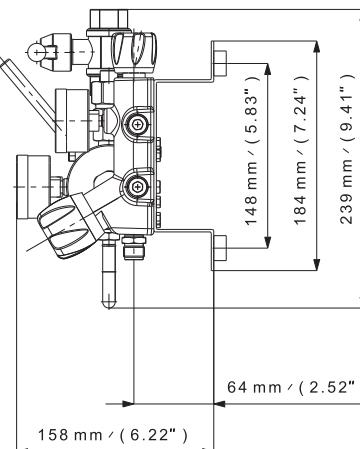

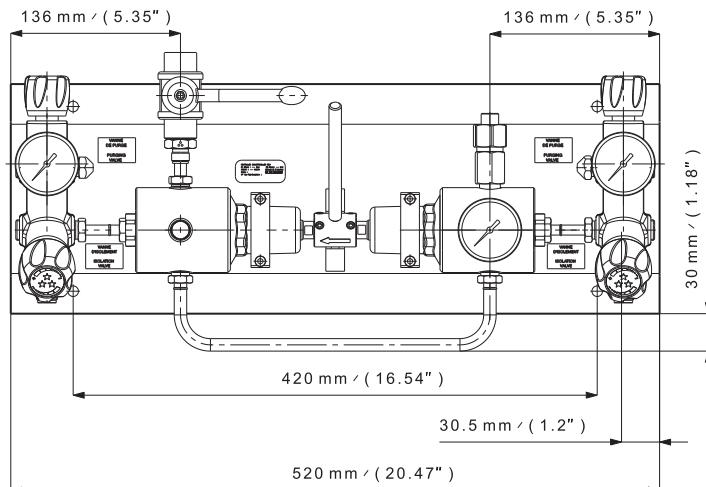

- Reduced seat effort increases life of the regulator and reduces the ownership cost.
- Non-whipping filter on bottom inlet improves safety of the operator during the cylinder replacement.
- Can be equipped with an outlet ¼ turn shut-off valve (Multi-turn valve with 30 bar or 50 bar version for oxygen use).
- Can also be equipped with a collection tube on the safety relief valve and purge outlet.
- Using contact gauges, the switch over board can also be equipped with an alarm box to indicate the source status.
- Special carbon dioxide CO₂ version available (inlet pressure 200 bar or 300 bar with maximal flow = 80m³/h)
- Special FDA compatible version available on demand
- Acetylene version available:
 $P_1 = 25 \text{ bar}/P_2 = 1 \text{ bar}/Q = 6,5 \text{ Nm}^3/\text{h}$
- Used with acetylene, this product must be installed with a flash back arrestor complying with the standard EN 730 located downstream.
- Propane version also available:
 $P_1 = 25 \text{ bar}/P_2 = 4 \text{ bar}/Q = 10 \text{ Nm}^3/\text{h}$

SERIES TD 500 | SWITCH OVER BOARD (cont'd)

AUTOMATIC VERSION

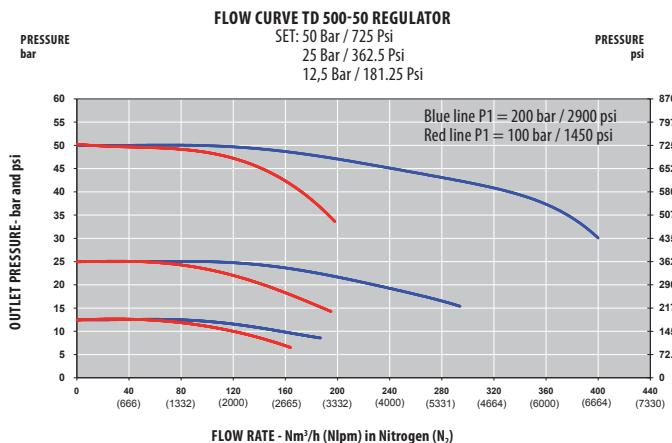

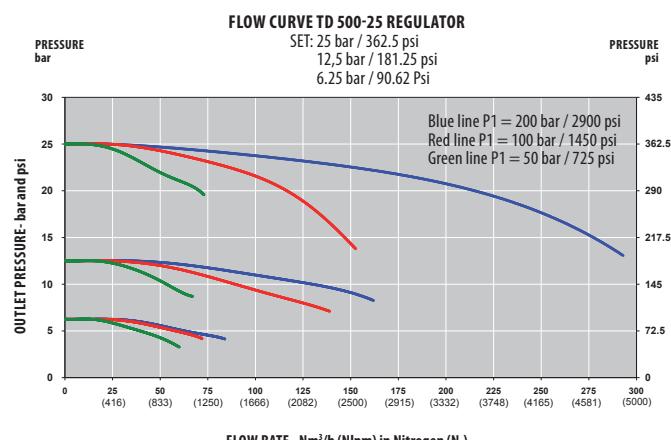

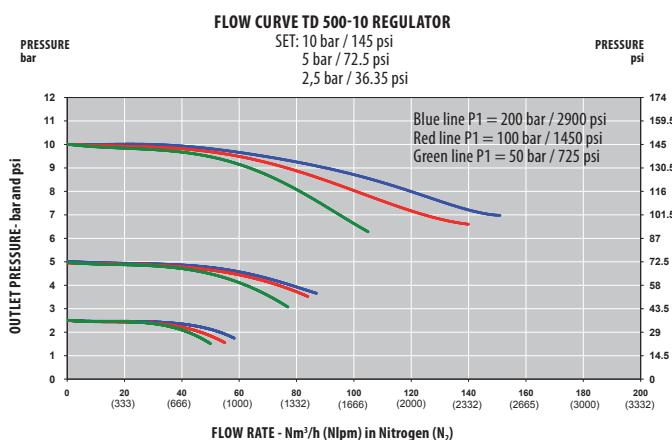

3 inlet ports

SPECIFICATIONS

Female ports	G 3/8 (inlet/outlet) or 1/4 NPT (inlet/outlet)	Weight	$\pm 13 \text{ kg}$ $\pm 29.0 \text{ lbs}$	Inlet pressure	200 bar 2900 psi
Seat seal	PCTFE	Leak rate	$10^{-8} \text{ mbar l/s He}$	Outlet pressure	10/25/50 bar 145/363/725 psi
O-ring	EPDM - standard NBR FPM	Temperature range	-20°C to + 60°C -4°F to + 140°F	Nominal Flow	50/50/100 Nm³/h (N₂)
Diaphragm	AISI 304 Hastelloy®	Gauges	High and low pressure (M10 x 1 or 1/8 NPT)	Oxygen use	Brass only with inlet pressure 200 bar

SERIES TD 502 COMPACT | SWITCH OVER BOARD

- Diaphragm dual stage
- Balanced-Valve Technology
- Purity up to 5.0
- Inlet Pressure: 300 bar (4350 psi)
- Outlet Pressure: 8/15/40 bar (116/218/580 psi)
- Acetylene version (AD - C₂H₂): P1 = 20 bar (290 psi) P2 = 0,8 bar (12 psi)

- ★ 2 x 1 inlet/1 outlet
- ★ Inlet/outlet pressure gauges
- ★ 1 safety relief valve
- ★ O₂ application compatible
- ★ Semi-automatic
- ★ 2 stages
- ★ 2 x SL 800 regulators (1st stage) + 1 x DC 50 regulator (2nd stage)
- ★ Regulators with Balanced-Valve Technology
- ★ High flow

Special requirements on request

APPLICATIONS

- Ideally suited to insure gas supply from many high-pressure sources of high purity non-corrosive gases with high flow
- Designed for applications which need a high flow rate and a very stable and constant outlet pressure.

KEY FEATURES

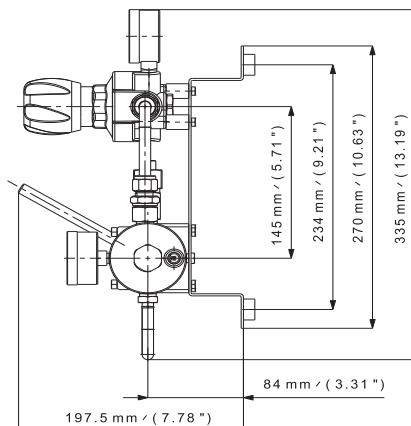

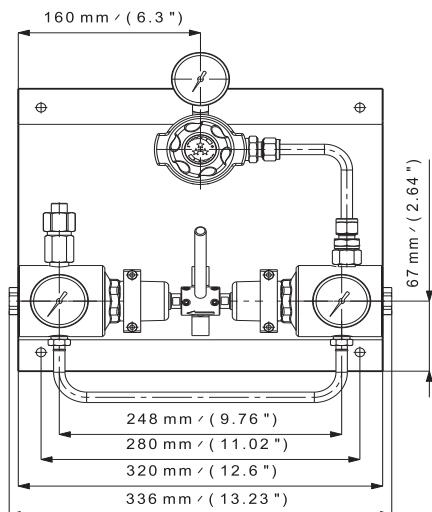

- No risk that a source flows into the other one.
- Ready to install with all components pre-mounted on a board.
- Best-in-class pressure stability with Balanced-Valve Technology: the effect of inlet pressure fluctuations on outlet pressure are minimized. Balanced-Valve

Technology enables the delivery of a very stable outlet pressure and flow.

- Reduces the efforts on the seat to increase life of the regulator and reduces the ownership cost.
- Can be equipped with an outlet shut-off valve.
- Adjustable version available (handwheel on the 2nd stage DC 50 regulator).
- Using contact gauges, the switch over board can also be equipped with an alarm box to indicate the source status.
- Acetylene version available: P1 = 20 bar / P2 = 0,8 bar / Q = 10 Nm³/h
- For use with acetylene this product must be installed with a flash back arrestor complying with the standard EN 730 located downstream.

Version without handwheel on the DC50 (STD version)

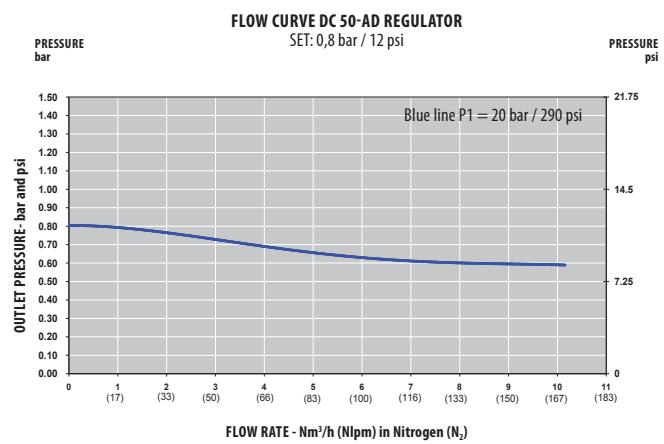

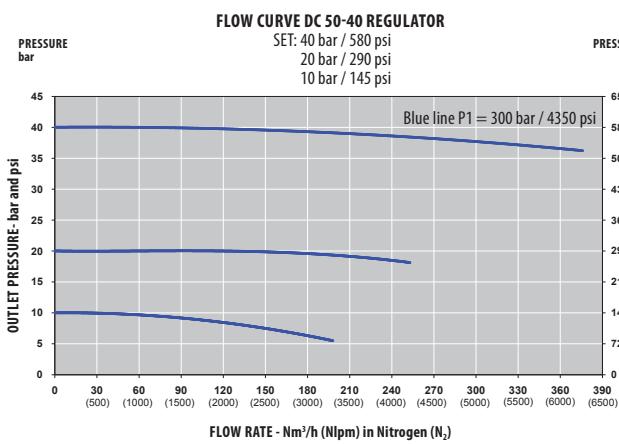

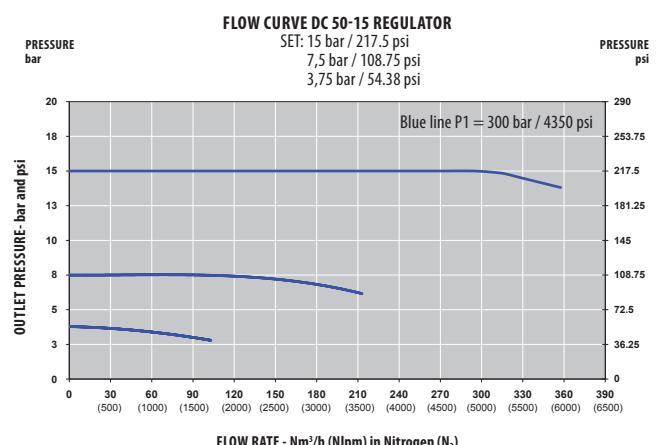

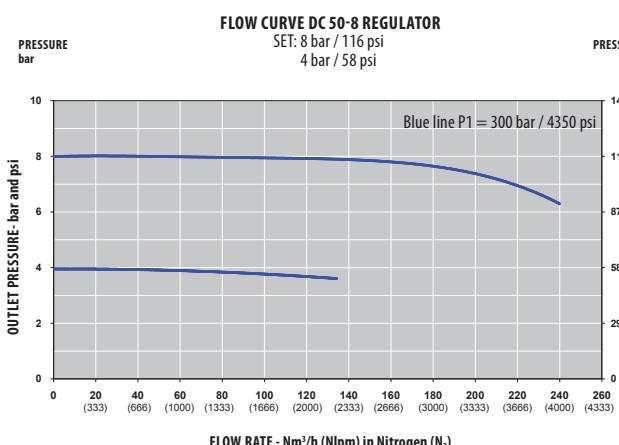

Version with handwheel on the DC50 (HW version)

BA 10 / BA 11 | ALARM BOXES

- Visual and acoustic alarm for automatic detection of faulty outlet pressure.
- The alarm boxes can be used in explosive atmosphere ('Ex' special version).

ALARM BOXES

- ★ 3 contacts (BA 10)
- ★ 10 contacts (BA 11)
- ★ detection of faulty P2

Special requirements on request

KEY FEATURES

- Detects the moment when the cylinder is empty when connected to a switch over board or a supply board. It also indicates that the equipment works correctly.
- Visual and acoustic display
- Repetition of the alarm by temporisation
- Can be used with all kind of gauges
- Connectable to remote alarms
- Delivered without power supply cable
- The BA 11 alarm box is delivered with a yellow front panel
- CE marked (CEM directive)
- Compact ABS housing

OPTIONS

- Special explosive atmosphere version (BA 10 Ex - BA 11 Ex)

PRESSURE GAUGES

Spare part pressure gauges for ROTAREX regulators, points of use, supply boards or switch over boards

PRESSURE GAUGES

- ★ Standard or contact versions available
- ★ Vertical or rear mounting connections

Special requirements on request

KEY FEATURES

- Radial (6 o'clock) or back mounting
- Connection : M10 x 1 male, 1/4NPT male or G 1/4 male
- Many pressure ranges available
- Material: cuprous alloy or stainless steel
- Standard or contact gauge
- Accuracy class: 1,6 (standard gauge)
- Nominal diameter: Ø 63/50/40/36 mm

OPTIONS

- Different connections
- Different diameters

Sliding contact gauge

- Normally Open (No)
- Accuracy class: 2,5
- Adjustment of switching point with a key
- Contact load ≤10 Watt/10 VA.
- Switching current min. 20 mA, max. 500 mA.
- Cable length 2 m, cable outlet left-hand
- Cannot be used with explosive or combustive gases

Inductive contact gauge

- Normally Open (NO)
- Accuracy class: 2,5
- Adjustment by twisting of contact hood
- Contact-free "contact release" without wear
- Cable length 2 m, cable outlet right-hand
- Compatible with explosive or combustive gases

CONTACT VERSION

Available with vertical or rear mounting connections (normally open)

CEN EXT/TD EXT | EXTENSIONS

Left or right, 2 or 3 cylinders extension for supply board (CM or MOD series) and switch over board (TD or CEN series)

EXTENSIONS

- ★ For supply boards and switch over boards
- ★ 2 or 3 cylinders version

Special requirements on request

KEY FEATURES

- High pressure header to connect cylinder batteries available for various gases
- 2 or 3 cylinder version
- Standard inlet: G 3/8 - Male
- Standard outlet: G 3/8 - Female
- With plate for TD, CM series (option for CEN & MOD series)

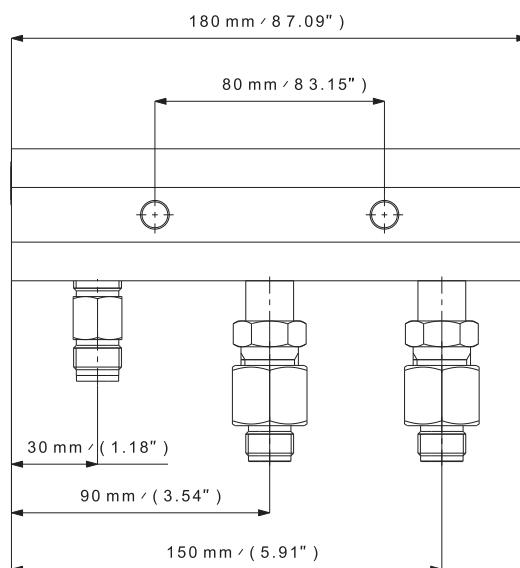

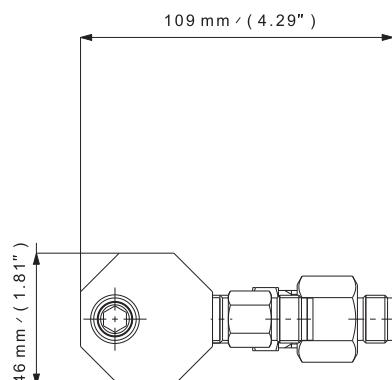

OPTIONS

- 1/4 NPT inlet connection adaptor
- Plate for CEN & MOD extension
- Shut off valves
- Non-return valve (type C or E)
- Flexible hose for connection with cylinders

CEN & MOD EXTENSION

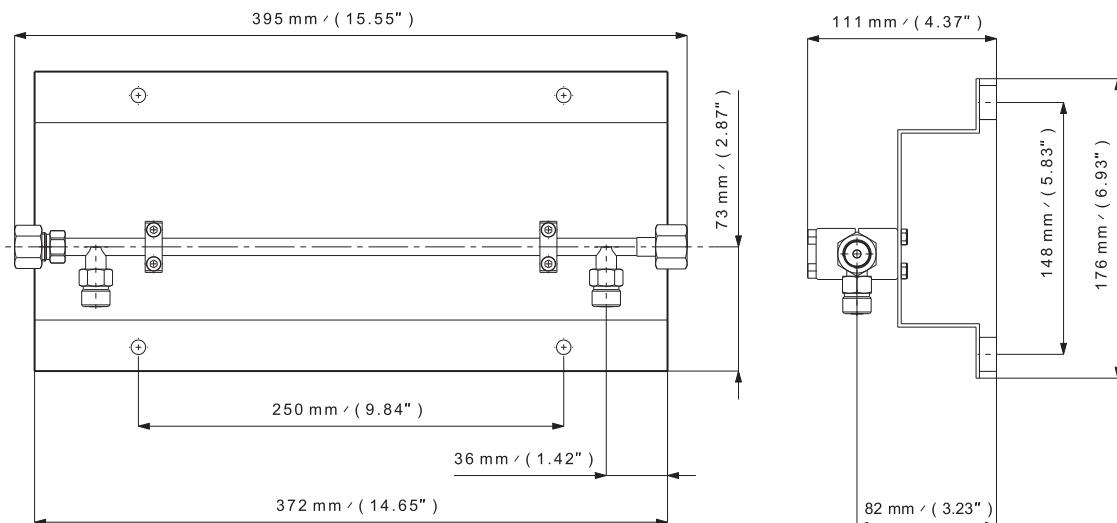

TD & CM SERIES EXTENSION

SPECIFICATIONS

Material	Raw brass (CEN & MOD) or Stainless steel (TD & CM)	Temperature range	-20°C to +60°C -4°F to +140°F	Ports (outlet)	G 3/8 - Female
Gasket	PA 6.6 (CEN & MOD versions)	Inlet pressure max.	300 bar 4350 psi	Shut-off valves	Option
O-ring	EPDM - standard NBR FPM	Seat orifice size	Ø 4 mm (TDL version)	Oxygen use	OK
Plate	Option (CEN & MOD versions) Standard (TD & CM versions)	Connections	2 or 3 cylinders		
Leak rate	10 ⁻⁸ mbar l/s He	Ports (inlet)	G 3/8 - Male, AFNOR - type C or type E

PIGTAILS

Straight or elbow pigtails ideally suited to connect CM series supply boards or TD series switch over boards to gas cylinders

PIGTAILS

- ★ high pressure
- ★ straight or elbow
- ★ stainless steel, electro polished

Special requirements on request

KEY FEATURES

- Cylinder connector according the following standard:
- AFNOR, DIN, NEN, UNI...
- Other connections: on demand
- Outlet connections: G 3/8 - Female
- Material: stainless steel, electro polished

OPTIONS

- Different outlet connection
- Shut off valve

FX 01 / FX 02 | FLEXIBLE HOSES

Flexible hoses for various pressures used for connecting supply boards, switch over boards and other equipment at the source of gas supply

FLEXIBLE HOSES

- ★ high pressure
- ★ PTFE + stainless steel (FX 01)
- ★ stainless steel (FX 02)

Special requirements on request

KEY FEATURES

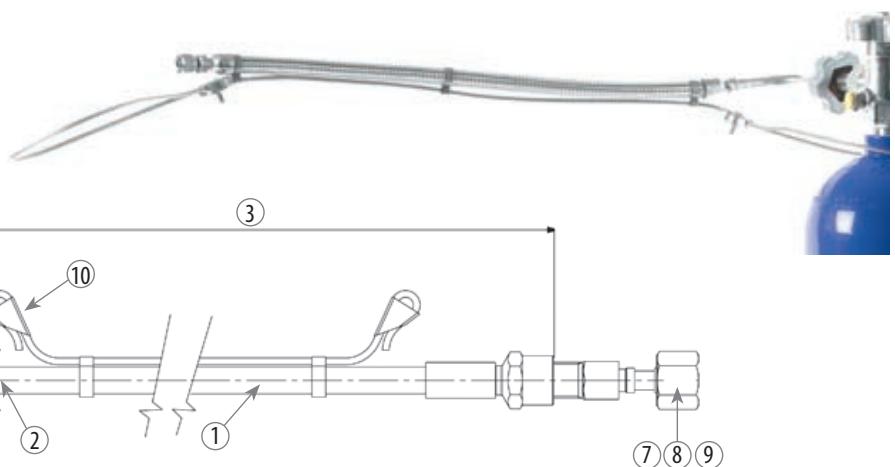

- Stainless steel hose (FX 02)
- Stainless steel + PTFE hose (FX 01)
- Compatible with neutral and corrosive gases according to the hose type.
- The hose is composed of a stainless steel double braid, a stainless steel or PTFE inside, and end connections.
- The hose is standardly equipped with a stainless steel safety cable as a safety best practice.

OPTIONS

- Without safety cable version
- Elbow version

DUOBLOC | 3 INLETS/2 OUTLETS MONOBLOCK VALVES

Monoblock valves with 3 common inlets and 2 manual and multi-turn shut off valves for various pure gases

MONOBLOCK VALVES

- ★ 200 bar or 300 bar
- ★ Multi-turn
- ★ 3 inlets/2 outlets

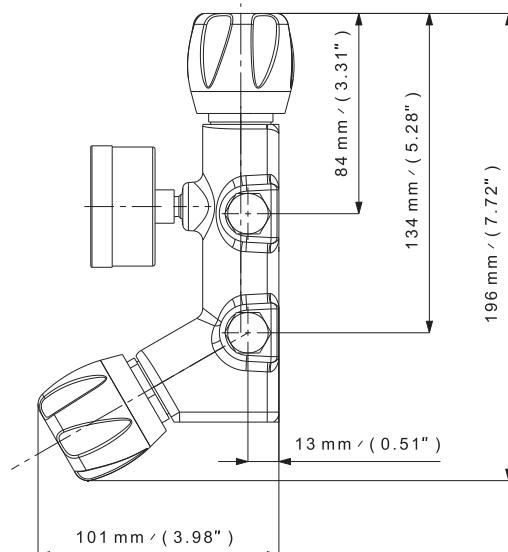

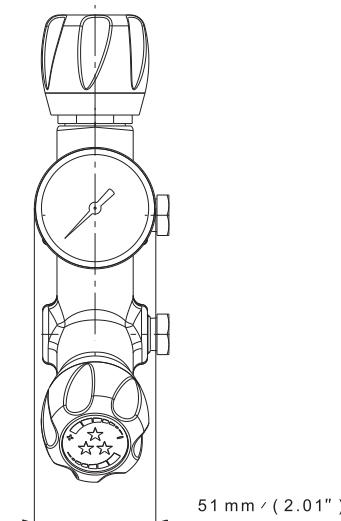

Special requirements on request

KEY FEATURES

- Purity up to 6.0
- Multi-turn version
- Raw brass, chrome plated brass or stainless steel
- 3 common inlets
- 2 manual shut off valves with non-rotating seat disc holder (brass version), with diaphragm (stainless steel version)
- 1 high pressure gauge
- Standard inlet/outlet: G $\frac{3}{8}$ - Female
- Rear thread for panel mounting
- Stainless steel version only available in 200 bar

OPTIONS

- Various inlet/outlet connections including $\frac{3}{8}$ NPT - Male, $\frac{1}{4}$ NPT - Female
- NBR or FPM O-ring
- Many inlet/outlet fittings available

SV 10 SAFETY RELIEF VALVE

Equipped with a valve opening at the set up value to evacuate the over pressure build in the process

SAFETY RELIEF VALVE

- ★ Connectable
- ★ CE marked (97/23/CE)
- ★ AISI 303 or AISI 316L

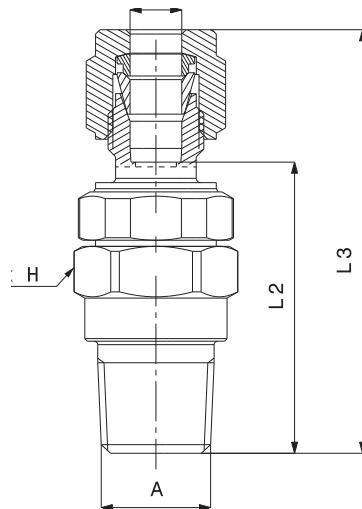

Special requirements on request

KEY FEATURES

- CE marked according to the European Directive 97/23/CE.
- Compatible with all Rotarex regulators, supply boards and switch over boards.
- Setup value defined.
- Small dimensions.
- Compatible with many gases (see table).
- Delivered with a P.A flat seal for the chrome-plated brass version and a PCTFE flat seal for the AISI 316L version.
- Delivered with the user manual.

OPTIONS

- The safety relief valve must be dimensioned in such a way that the pipe pressure will under no circumstances surpass the conception pressure of pipes, even when the safety valve is venting.
- The pressure in the pipe must not exceed the calculated value even when the device is open.

GAS CYLINDER HOLDER

Designed for the storage of one or large number of gas cylinders in an appropriate area

- ★ Can be fixed permanently to the wall
- ★ Securely holds cylinder in place
- ★ Allows permanent designation of appropriate cylinder storage area
- ★ Delivered with a fixing belt
- ★ Many cylinder holders can be used together, side by side
- ★ Part number: 202500000007
